

Vision therapy Morgan Greene

22-2-11

I have been coming to vision therapy since August 2010. I was having trouble with 3D things. They'd give me headaches and I would get sick to my stomach. I also had trouble focusing and losing my place when I read. Vision therapy has helped me not to lose my place when I read and focus better. But I'm still working on 3D but I'll get there, I don't get headaches as much as I used to.

Dr. Adams and Probin are very fun teachers! They are also very nice! They make vision seem easier! We do lots of activities.

Thank you Dr. Adams
and Probin.
